

CLAIM AMENDMENTS

B1 1. (Currently Amended) A thin film magnet having a microstructure composed of ~~crystalline~~ monocrystalline phases of the $\text{Nd}_2\text{Fe}_{14}\text{B}$ structure type, ~~whose~~ having a c-axis ~~is~~ oriented in a film-thickness direction, and amorphous phases, wherein each ~~said~~ $\text{Nd}_2\text{Fe}_{14}\text{B}$ type ~~crystalline~~ monocrystalline phase is isolated from ~~the others~~ other monocrystalline phases by the amorphous phase, and said thin film magnet is formed by forming ~~a~~ an $\text{R}_x\text{M}_{1-x-y}\text{B}_y$ thin film (~~in the formula, where~~ where R is at least one ~~(1) or more elements~~ element selected from the group consisting of Nd, Pr, Tb, Ho, and Dy, and M is at least one ~~(1) or more elements~~ element selected from the group consisting of Fe, Co, and Ni, and $0.11 \leq x \leq 0.15$, and $0.12 \leq y \leq 0.20$) on a front side of a substrate by a physical deposition method while controlling a temperature of the front side of ~~said~~ the substrate within a range of $\pm 2^\circ\text{C}$.

2. (Currently Amended) The thin film magnet according to Claim 1, wherein ~~said~~ the amorphous phases are ferromagnetic.

3. (Withdrawn)
